What are the risks of investing?

Risk indicator for the MMT GIF

| | | | | | | |
|-----------------------------|------------------------------|----------|---|---|---|---|
| ⇐ Potentially lower returns | Potentially higher returns ⇒ | | | | | |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 |

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the MMT GIF's assets go up and down (volatility). A higher risk generally means higher potential returns over time, but more ups and downs along the way.

To help you clarify your own attitude to risk, you can seek financial advice or work out your risk profile at www.sorted.org.nz/tools/investor-kickstarter.

Note that even the lowest category does not mean a risk-free investment, and there are other risks (described under the heading 'Other specific risks') that are not captured by this rating.

This risk indicator is not a guarantee of a fund's future performance. The risk indicator is based on the returns data for the 5 year period ending 30 June 2020. While risk indicators are usually relatively stable, they do shift from time to time. The risk indicator will be updated in future fund updates.

See the Product Disclosure Statement (PDS) for more information about the risks associated with investing in the MMT GIF.

MMT is exempted from the requirement of providing market index comparisons, as there is no appropriate comparative market index and no suitable comparable peer group index for the MMT GIF against which to assess either movements in the market in relation to return from the assets in which MMT invests or the performance of MMT GIF as a whole. Refer to document titled 'No Market or Peer Group Indices' disclosed on the offer register as '20181029 Midlands Market Index Exemption.pdf'.
